

MPACT®

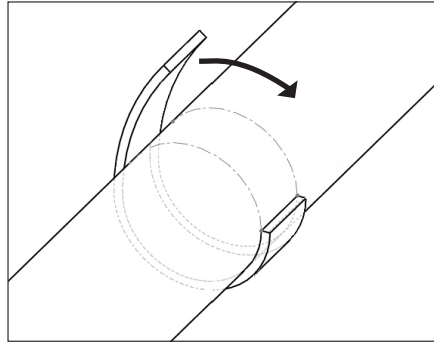

**MARINE PIPE AND
CABLE TRANSIT
SYSTEM**

INSTALLATION INSTRUCTIONS **INSTRUCCIONES • MODE D'EMPLOI**

STEP 1

Wrap plastic pipes (if present) with a single layer of MWS Marine Wrap Strip on both sides of sleeve, recessed 12.7 mm from sleeve ends.

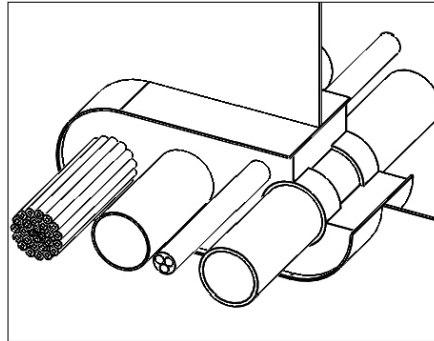

Tips:

- All surfaces to be clean, sound, dry, frost-free and free of bond-breaking contaminants and loose materials.
- Min 6 mm spacing required for watertight and gastight pressures to be achieved.
- Wrap strip (if present) may be secured around pipe using tape.
- To enhance adhesion and accelerate the curing process, the filler blanket may be sprayed with water prior to sealant application. Inner surface of sleeve to be dried prior to sealant application.
- Sealant may be tooled using a putty knife, using a wet rag, or using your hands with soapy water (and latex gloves if preferred)

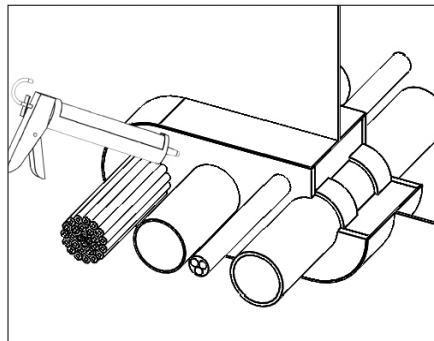

STEP 2

Install MPACT® Filler Blanket within sleeve to fill all voids around penetrants, recessed 12.7 mm from sleeve ends to accommodate sealant.

STEP 3

Apply MFS Sealant over MPACT® Filler Blanket and MWS Marine Wrap Strip (if present) on both sides of sleeve to a min 12.7 mm thickness, flush with sleeve ends.

*Please refer to Type Approval Certificate in use for approved penetrant types/sizes, sleeve dimensions, insulation requirements, etc.
