HAZARDOUS MATERIALS IDENTIFICATION SYSTEM HAZARD RATINGS (continued)

FLAMMABILITY HAZARD (continued): 1 Sight Hazard: Materials that must be pre-heated before igniting. 2 Heat Hazards: Flammable materials that will ignite at room temperature conditions before ignition and combustion can occur. This usually includes the following: Materials that will burn in air when exposed to a temperature of 815.5°C (1500°F) for a period of 1 minute or less; solids and liquids, even under low pressure, that have a flash point of 20°C (68°F) (i.e. OSHA Class IIIb); and Most ordinary combustible materials (e.g. wood, paper, etc.). 2 Moderate Hazard: Materials that must be moderately heated or exposed to relatively high ambient temperatures before they will ignite at room temperature conditions. Under normal conditions, form hazardous atmospheres in air, but under high ambient temperatures or moderate heating may release vapor in sufficient quantities to produce hazardous atmospheres with air. This usually includes the following: Flammable liquids; Flammable pyrophoric liquids; Flammable cryogenic liquids; and Materials that polymerize, decompose, or self-react at ambient temperature and/or pressure and have a high potential (or which produce) fire hazards (e.g. sodium, zine, and sodium amalgam). 3 Severe Hazard: Materials that will polymerize, decompose, or self-react at ambient temperature and/or pressure and have a high potential (or high risk) to cause significant heat generation or explosion.

NATIONAL FIRE PROTECTION ASSOCIATION HAZARD RATINGS: HEALTH HAZARD: 6 Materials that, under emergency conditions, would offer no hazard beyond that of ordinary combustible materials. Gases and vapors with an LEL for acute inhalation toxicity greater than 10,000 ppm. Dusts and mists with an LC50 for acute inhalation toxicity greater than 200 mg/L. FLAMMABILITY LIMITS IN AIR: Much of the information related to fire and explosion is derived from the National Fire Protection Association (NFPA) Flammable and Explosive Limits in Air. Flash point is the minimum temperature at which a liquid gives off sufficient vapor to form an ignitable mixture with air near the surface of the liquid or within the test vessel. Autoignition Temperature: Minimum temperature of a solid, liquid, or gas required to initiate or sustain combustion if exposed to air. Minimum Concentration of Ignition: LEL. Lowest Concentration of a flammable vapor or gas/mixture that will ignite and burn with a flame. UEL: Highest concentration of a flammable vapor or gas/mixture that will ignite and burn with a flame.

TOXICOLOGICAL INFORMATION: Human and Animal Toxicology: A characteristic hazard as derived from human data, animal studies, or from the results of studies with similar compounds are presented. LEL: Lethal Dose (solids & liquids) that kills 50% of the exposed animals. LC50: Lethal Concentration (gases) that kills 50% of the exposed animals. ppm: concentration expressed in parts of material per million parts of air or water. mg/L: concentration expressed in weight of substance per volume of air. mg/m3: concentration expressed in weight of substance per unit environmental volume. Temp: flash points are expressed in °C (°F). Td: flash point greater than 35°C (95°F) in a water-miscible solution or dispersion with a water-non-miscible solvent. TdC: flash point greater than 35°C (95°F) in a water-non-miscible solvent. TdC: flash point greater than 35°C (95°F) in a water-miscible solution or dispersion with a water-non-miscible solvent.
